DETAILED ACTION

Election/Restrictions

- 1. Applicant's election without traverse of Species B in the reply filed on 2/8/2007 is acknowledged.
 - 2. Claims 7 and 10 are withdrawn from further consideration pursuant to 37 CFR
- 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/8/2007.

Specification

3. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

Art Unit: 3724

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

- 5. The abstract of the disclosure is objected to because the use of the words "This invention relates to", and "means" and "control means" should be avoided. Correction is required. See MPEP § 608.01(b).
- 6. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.

Art Unit: 3724

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

Page 4

- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

7.

Content of Specification

- (a) <u>Title of the Invention</u>: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words may not contain more than 500 characters.
 - (b) <u>Cross-References to Related Applications</u>: See 37 CFR 1.78 and MPEP § 201.11.
 - (c) <u>Statement Regarding Federally Sponsored Research and Development</u>: See MPEP § 310.
 - (d) <u>The Names Of The Parties To A Joint Research Agreement</u>: See 37 CFR 1.71(g).
 - (e) Incorporation-By-Reference Of Material Submitted On a Compact Disc:
 The specification is required to include an incorporation-by-reference of electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.

Art Unit: 3724

(f) <u>Background of the Invention</u>: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:

(1) <u>Field of the Invention</u>: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field."

Page 5

- (2) Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98: A description of the related art known to the applicant and including, if applicable, references to specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."
- g) Brief Summary of the Invention: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (h) <u>Brief Description of the Several Views of the Drawing(s)</u>: See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- (i) Detailed Description of the Invention: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.

Art Unit: 3724

(j) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).

- (k) Abstract of the Disclosure: See MPEP § 608.01(f). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).
- (I) <u>Sequence Listing</u>, See 37 CFR 1.821-1.825 and MPEP §§ 2421-2431. The requirement for a sequence listing applies to all sequences disclosed in a given application, whether the sequences are claimed or not. See MPEP § 2421.02.

Drawings

8. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "turnable cutting unit" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure

Art Unit: 3724

is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

9. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the bearings of claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

Art Unit: 3724

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

10. Claims 8 and 9 are objected to because of the following informalities:

In claim 8, line 4, there should be a comma between "housing" and "the brake

Claim 9, line 1 recites the limitation "Tool according to cla." 7", however, it appears that the applicant intended that the limitation read --Tool a. ling to claim 8", and the claim has been interpreted in that light.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

11. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

12. Claims 1-6, 8, and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3724

13. Regarding claim 1, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention.

See MPEP § 2173.05(d).

- 14. Regarding claim 1, the phrase "or the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).
- 15. Regarding claim 2, the phrase "possibly" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d). Additionally, as the elected embodiment does not have a gear transmission, and the assertion of the positive gear transmission in claim 2 would withdraw claims 2-4 as being pursuant to a non-elected species.
- 16. Regarding claim 6, the limitation "a shaft" renders the claim indefinite as claim 1, previously referred to a "shaft tube" and a "drive shaft" and it is unclear whether, the applicant is referring to an additional shaft or to a shaft mentioned in claim 1. If the applicant is referring to an additional shaft, then that shaft needs to be identified on the drawings, as it is not clear how the applicant's clamp means (47) in the elected embodiment partially surround the shaft (40).

Claim Rejections - 35 USC § 102

17. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3724

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

18. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Webster (EP0879553). Webster discloses a motor driven tool (hedge trimmer) comprising a drive unit (battery pack, 2) that via a shaft tube (1) enclosing a drive shaft and being provided with a handle (6) is connected to a cutting unit (18) which is turnably secured to the shaft tube (via 7), characterized in that the turnable connection is under the influence of a locking mechanism (10/14) which from the normal working position of the operator can be released by means of a control means (13) arranged at a distance from the locking mechanism (10/14) and close to the handle (6).

In regards to claim 2, Webster discloses wherein the locking mechanism (10/14) is connected to a rod (11) which is mainly parallel to the shaft tube and by means of which a turning or forward/backwards movement (hinge 12) is transferred form the control means (13) to a locking means being a part of the locking mechanism.

In regards to claim 3, Webster discloses wherein the locking mechanism (14) comprises a brake mechanism which by means of a force creating means (spring, 15) in the non locked position of the cutting unit (18) creates a braking force against outer forces that influence the cutting unit. When the actuator 13 is pushed inwardly, compressive forces are applied to the spring. When the compressive forces are removed from the actuator 13 and the spring 15, the peg 14 is forced back into the holes 10, which stop or "brake" the sliding handle 6 from sliding further down the shaft

Art Unit: 3724

In regards to claim 4, Webster discloses wherein the control means comprises a lever (area near actuator 13, that is opposite reference 11 along the pivot axis 12) turnably (pivots on axis 12) arranged at the shaft tube (1) and being directly or indirectly connected to the rod (11).

In regards to claim 5, Webster discloses wherein the locking mechanism comprises a clamp means (13/11/14 and 10).

As best understood, in regards to claim 6, Webster discloses that the clamp means (11/13/14 and 10) partial surround a shaft (1) around which the cutting unit is turnable.

19. Claims 1,5,6,8,9 are rejected under 35 U.S.C. 102(b) as being anticipated by Warashina et al. (U.S. Publication 2002/0095797), herein referred to as Warashina. Warashina discloses a motor driven tool (bush cutting apparatus) comprising a drive unit drive source, 21) that via a shaft tube (not numbered) enclosing a drive shaft (25) and being provided with a handle (12) is connected to a cutting unit (13) which is turnably secured to the shaft tube, characterized in that the turnable connection is under the influence of a locking mechanism (brake mechanism, 24) which from the normal working position of the operator can be released by means of a control means (clutch moving members, 45) arranged at a distance from the locking mechanism (24) and close to the handle (12) (see abstract).

In regards to claim 5, Warashina discloses wherein the locking mechanism comprises a clamp means (brake pads, 35).

As best understood, in regards to claim 6, Warashina disclose wherein the clamp means (35) completely or partly surround a shaft (25) around which the cutting unit (13) is turnable.

In regards to claim 8, Warashina discloses wherein the clamp means comprises a bearing housing (housing, 34; bearing unit, 71; Figure 2) taking up said shaft (25) and enclosing a brake pad (35) which is acted on by a turning rod (crankshaft 22) in order to lock the shaft (25) in the bearing housing (34) the brake pad (35) being under the influence of a spring means (disk shaped spring, 36).

Allowable Subject Matter

20. Claim 9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,516,522 to Schneider, U.S. Patent 7,108,451 to Ewer et al., U.S. Patent 6,260,278 to Faher, U.S. Patent 6,301,866 to Marshall et al., U.S. Patent 6,651,347 to Uhl, U.S. Patent 5,662,428 to Wilson, U.S. Patent 5,594,990 to Brant et al. U.S. Patent 5,933,966 to Yates et al., G.B. Patent 2266682 to Balley.
